How do we get Rosetta?

- <https://www.rosettacommons.org/software/license-and-download>
- Weekly Releases: (e.g. “2016.37”)
 - Latest version of the code, released roughly every week
 - Every revision passes scientific performance tests
- Numbered Releases (e.g. “3.7”)
 - A weekly release that’s relabeled, released roughly every 6 months
- All tutorials use version 3.8 (March 2017)
- Documentation & Demos:
 - <https://www.rosettacommons.org/docs/latest/Home>
 - <https://www.rosettacommons.org/demos/latest/Home>

Protein Structure Data

PDB files

- International standard
- Readable by PyMol, MOE, Chimera, etc
- One line per atom
- Useful for small number of structures
- Full info:
www.wwpdb.org/documentation/file-format
- **Must be processed with `clean_pdb.py` prior to use in Rosetta**

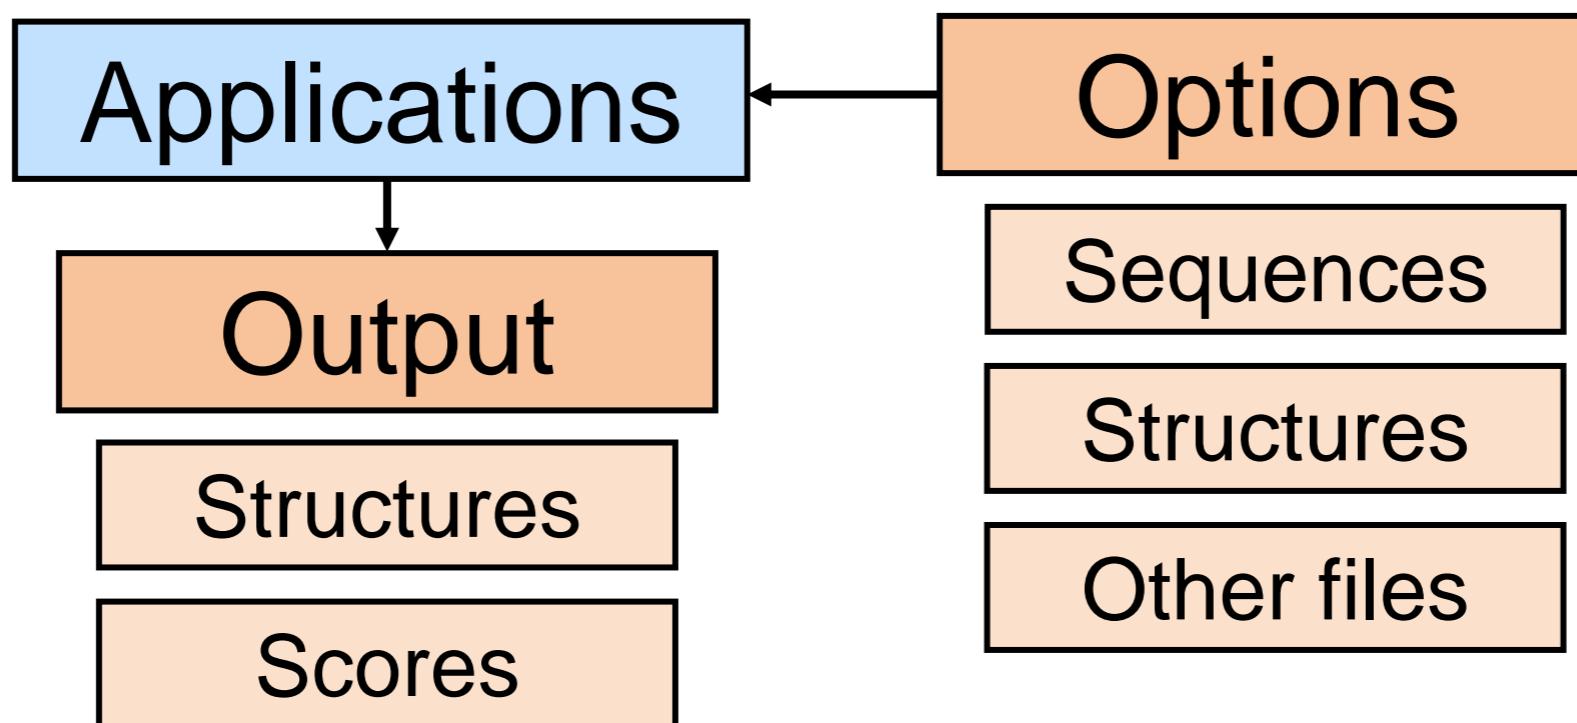

Silent files

- Specific to Rosetta
- Compact
- One line per residue
- Useful for archiving many structures
- Binary silent files: more compact, but not human-readable
- Full info:
https://www.rosettacommons.org/docs/last/test/rosetta_basics/file_types/silent-file
- Converted to pdb via `extract_pdb`

Other files: application-specific

- Span File: Defines which residues are in the membrane
- Loops File: Identifies the loop residues for loop closure
- Params File: Custom parameters for small molecules or non-canonical amino acids
- Constraint File: Experimentally derived restraints
- Fragment File: Short protein segments used for comparative modeling and de novo folding
- Res Files: Indicates which residue positions should be designed
