

Introduction to Antibody Structure

Rocco Moretti

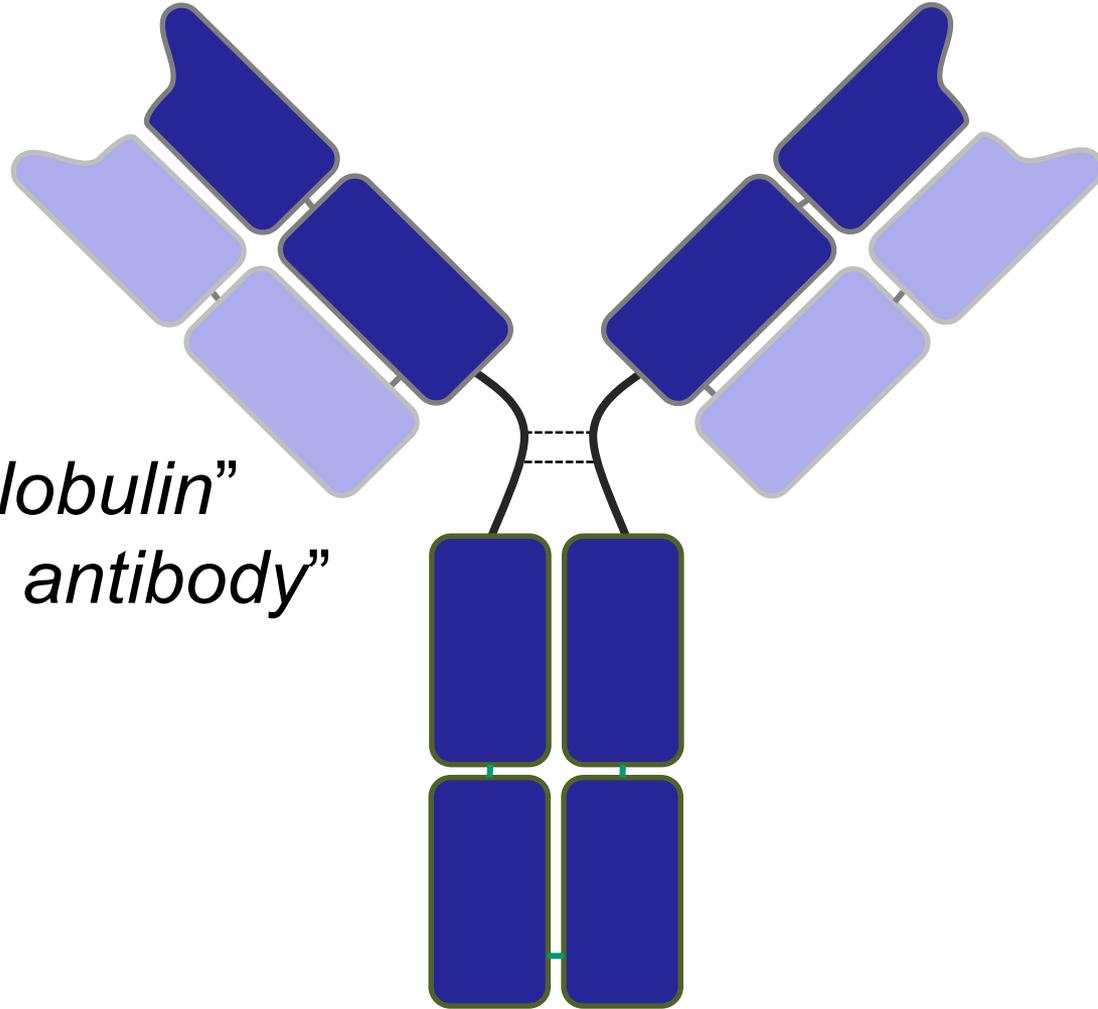

Center for Structural Biology and Institute of Chemical Biology
Departments of Chemistry, Pharmacology, and Biomedical Informatics

What is an antibody? (Structurally)

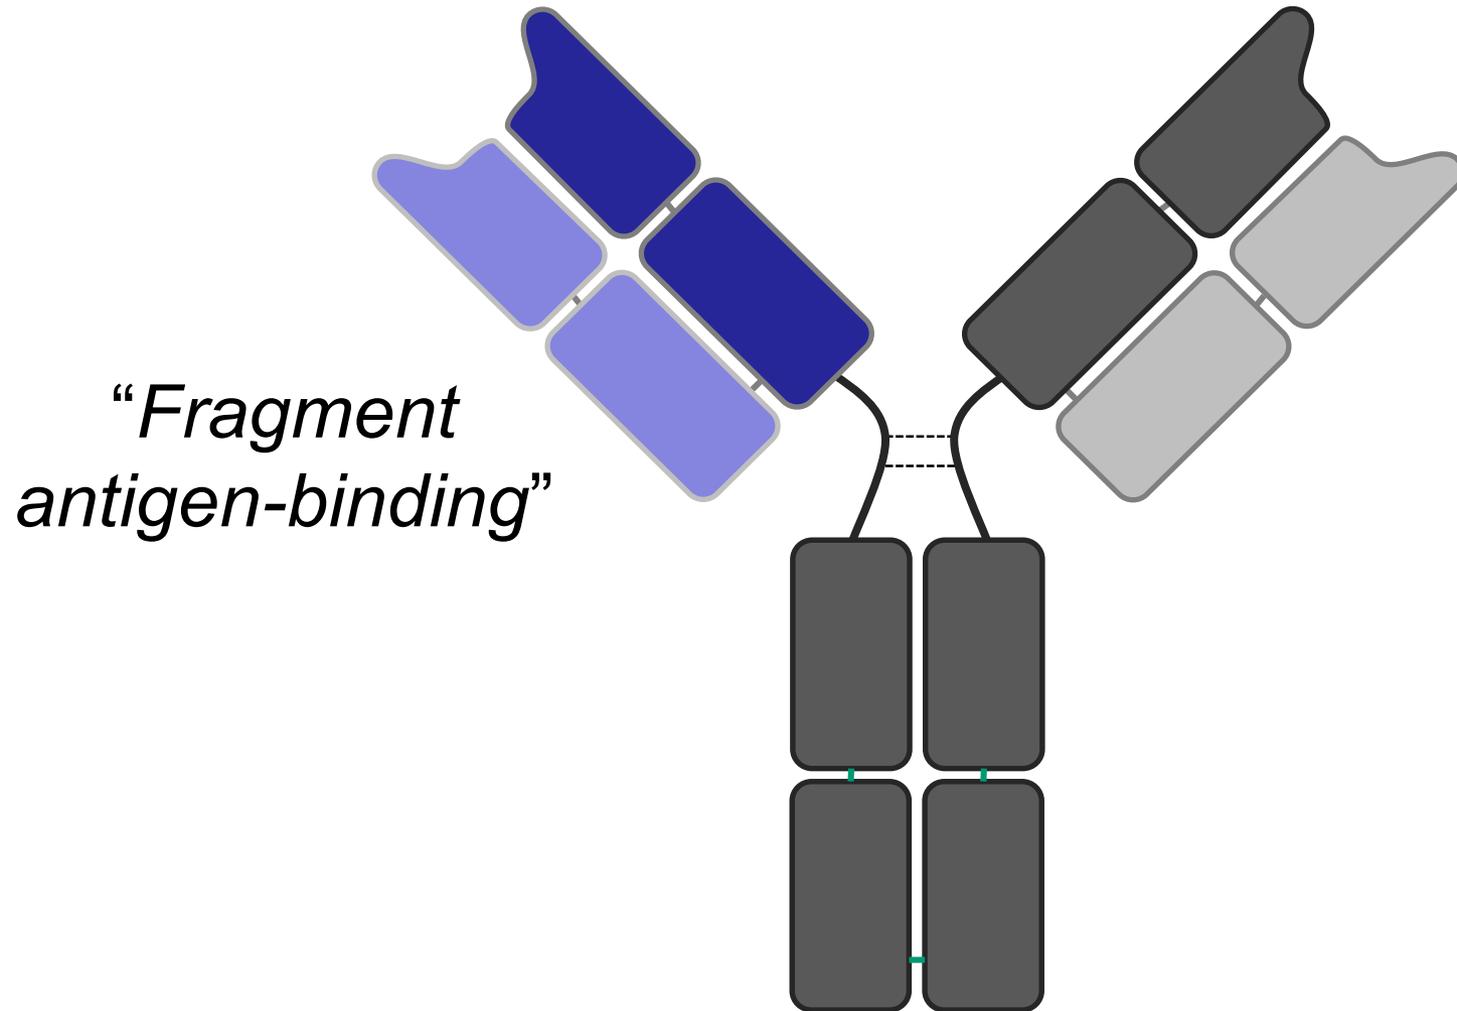

Antibody terminology: Ig

*“Immunoglobulin”
or “full length antibody”*

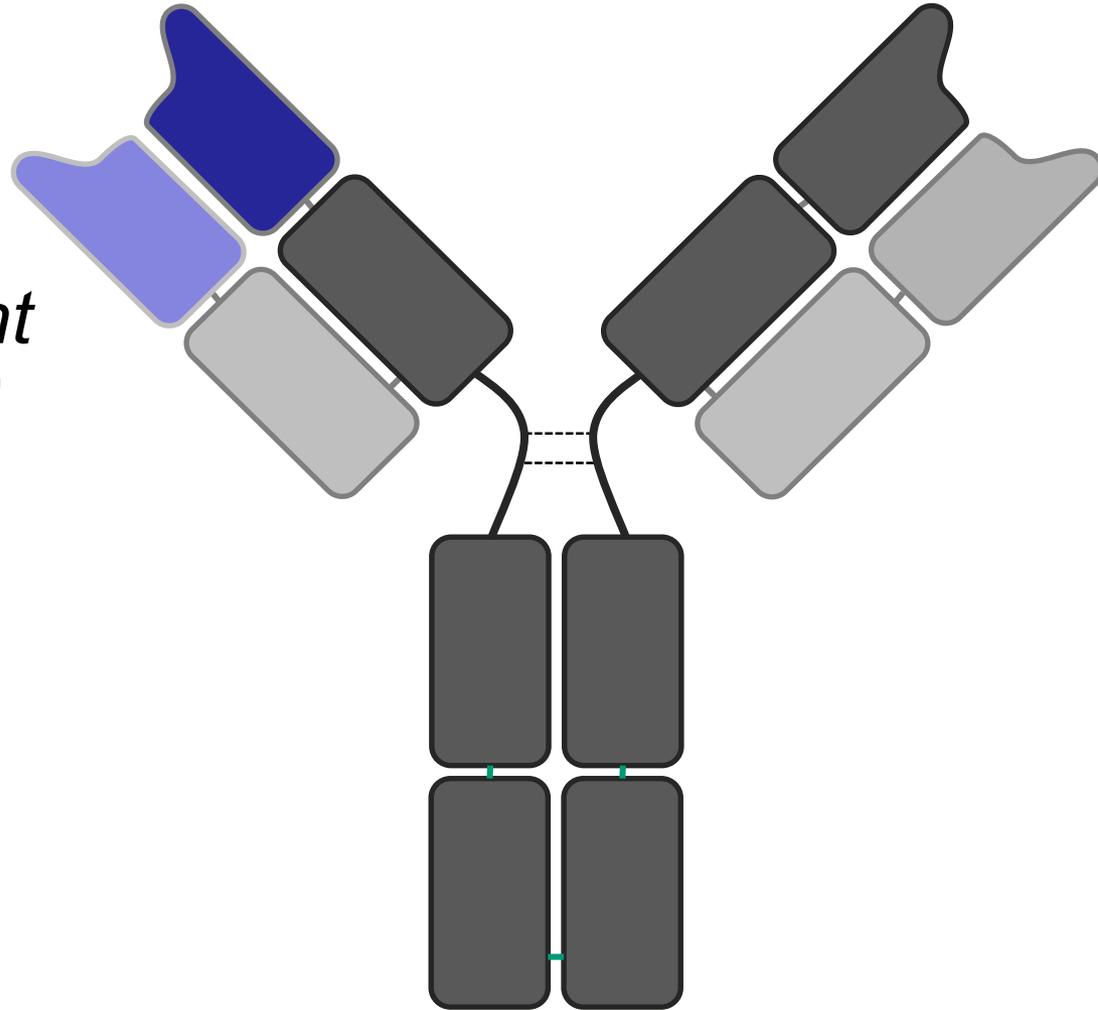

Antibody terminology: Fab

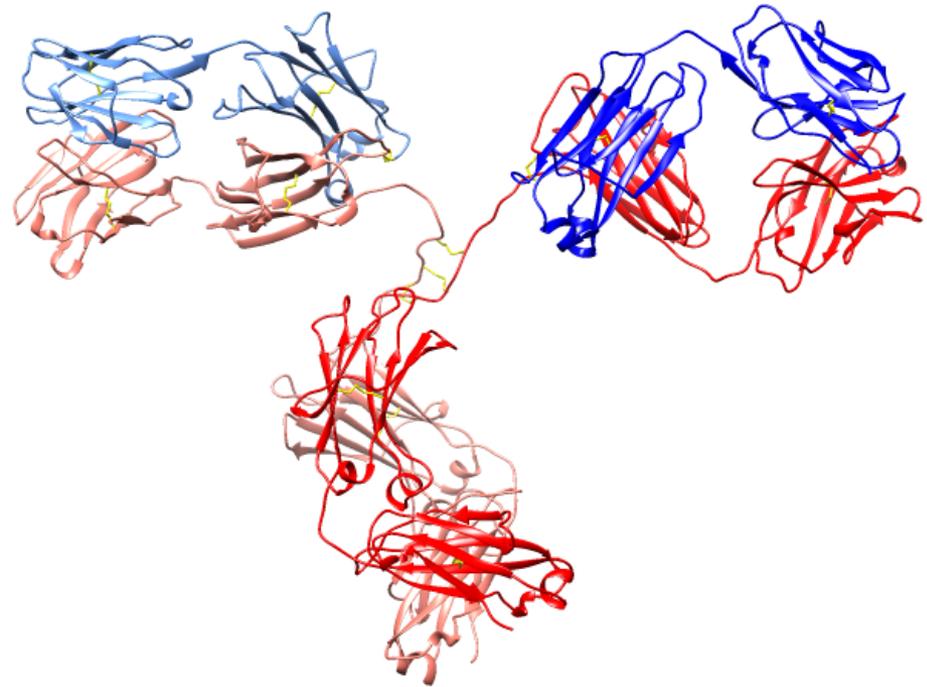

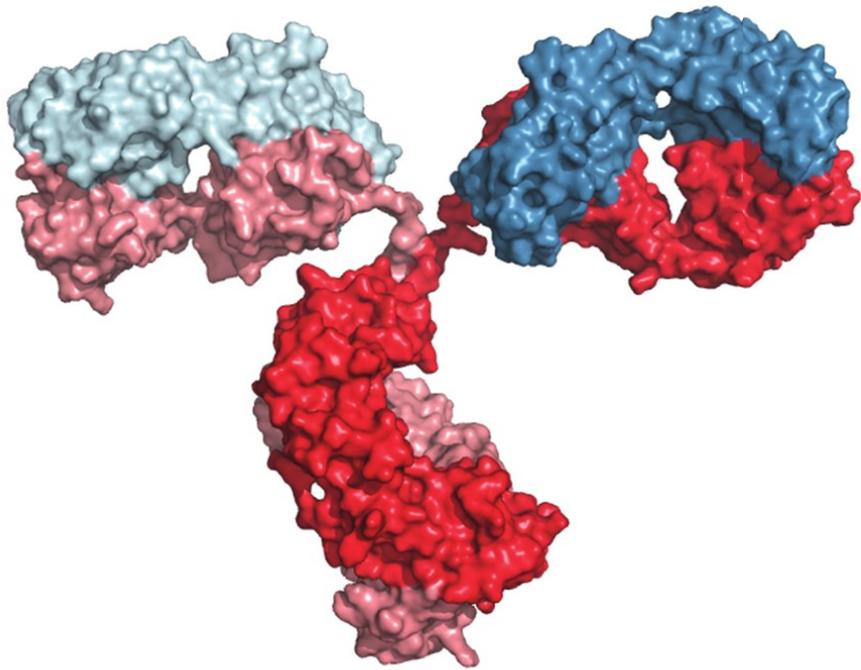

Antibody terminology: Fv

“Fragment variable”

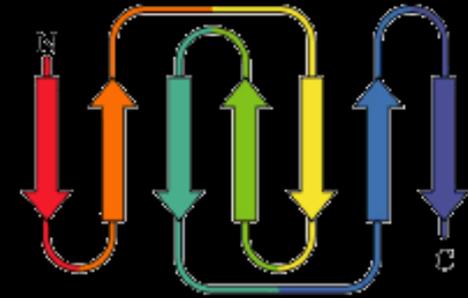

What is an antibody? (Structurally)

The immunoglobulin domain fold

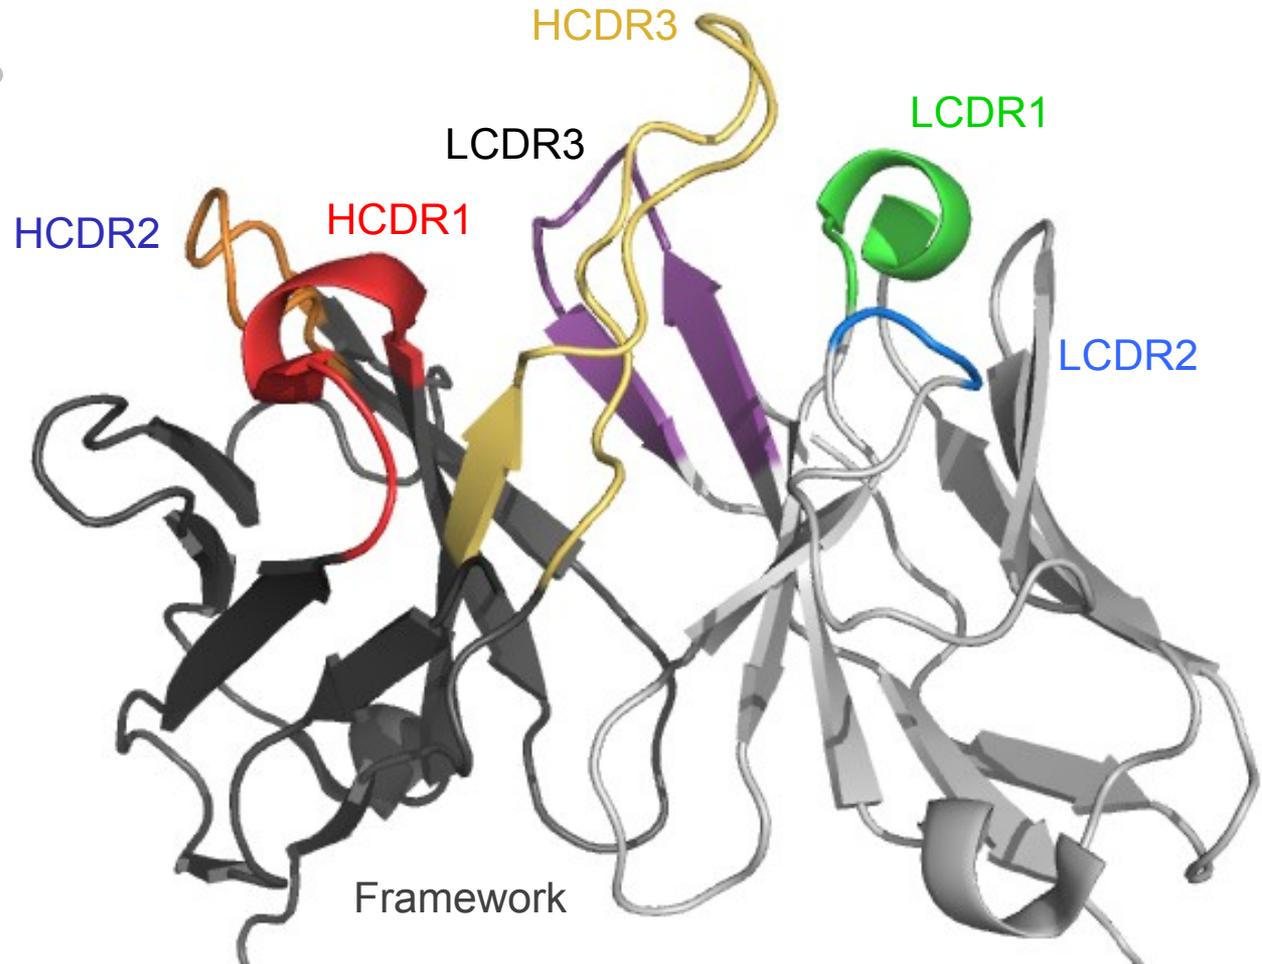

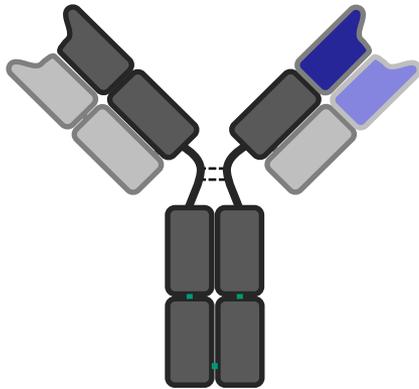

X-ray structure of the immunoglobulin domain fold

stacked: 4-stranded and
3-stranded antiparallel
 β -sheets

Complementarity determining regions

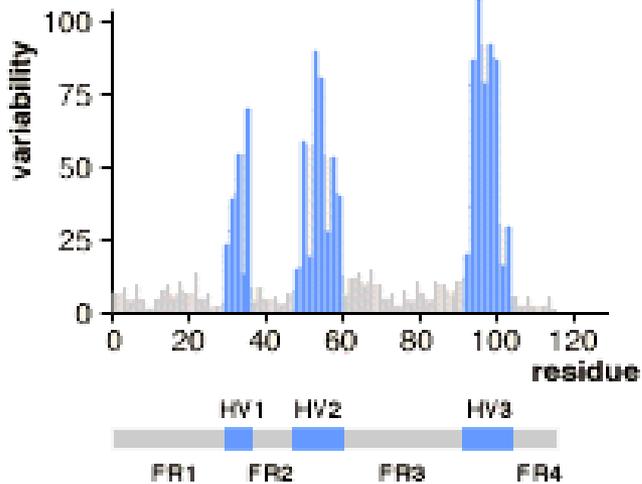

CH65
PDBID: 3SM5

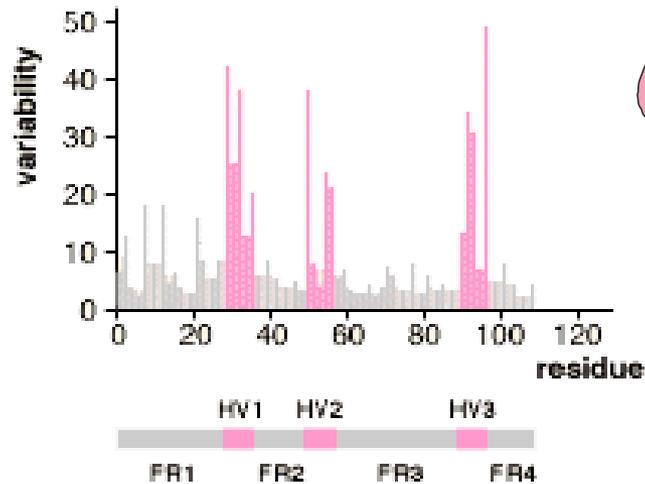

CDR are hypervariable

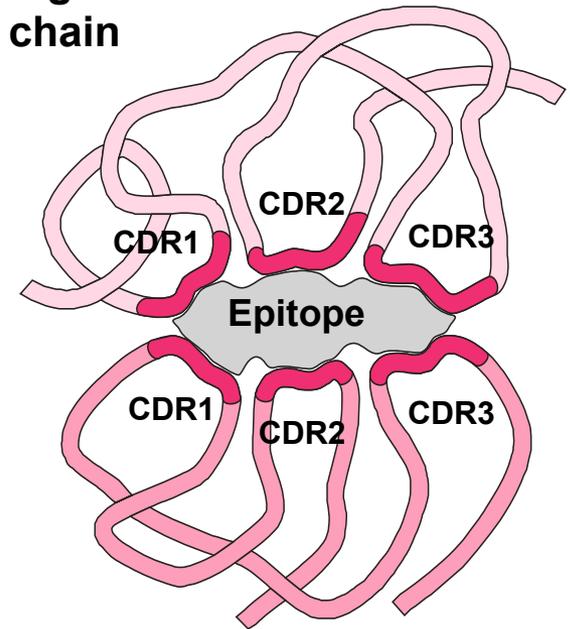

Heavy-chain V region

Light-chain V region

Light chain

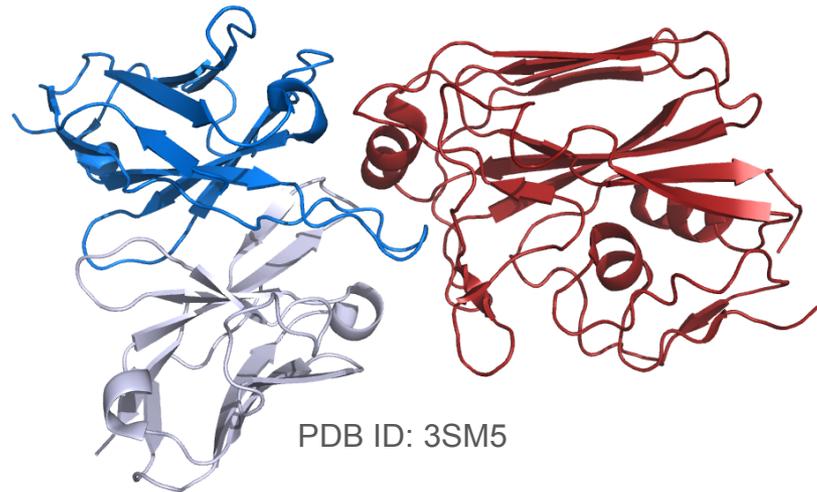

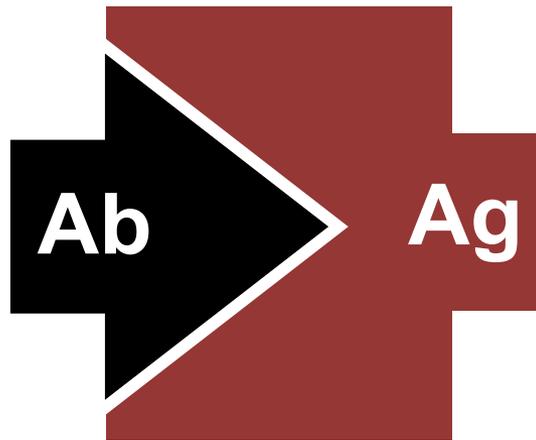

Heavy chain

Recognition of antigens

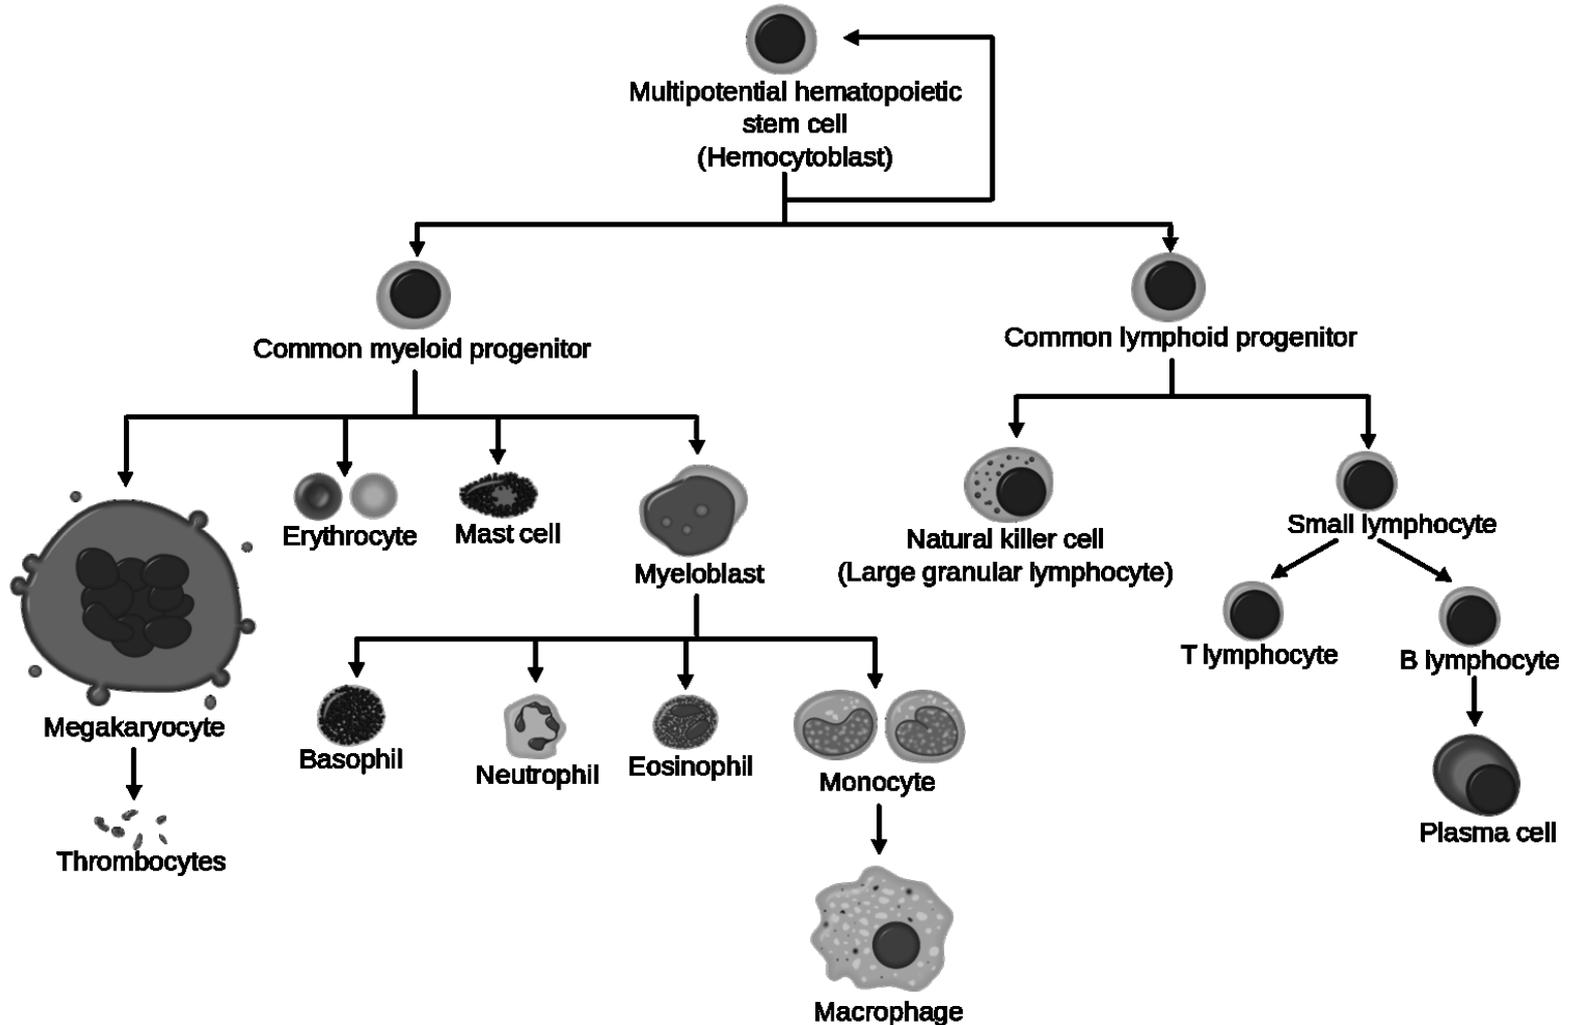

Protein-protein interactions are determined by shape and physicochemical properties of solvent exposed loops, such as CDR loops.

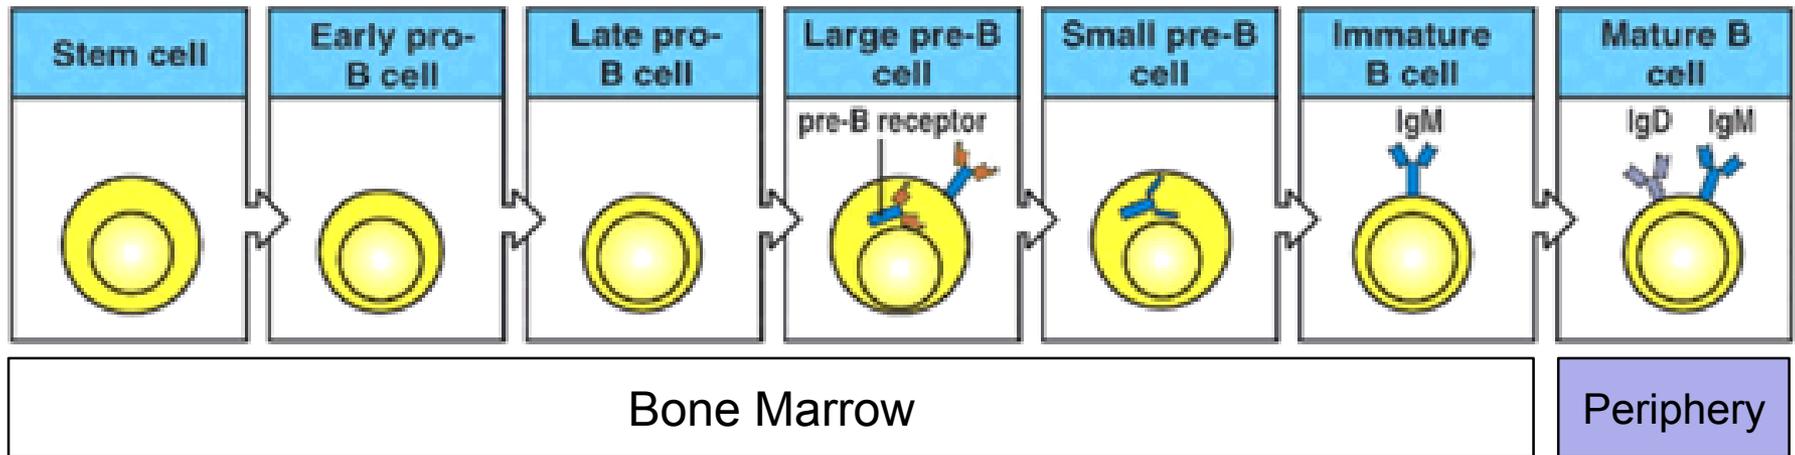

Sequence → Structure → Function

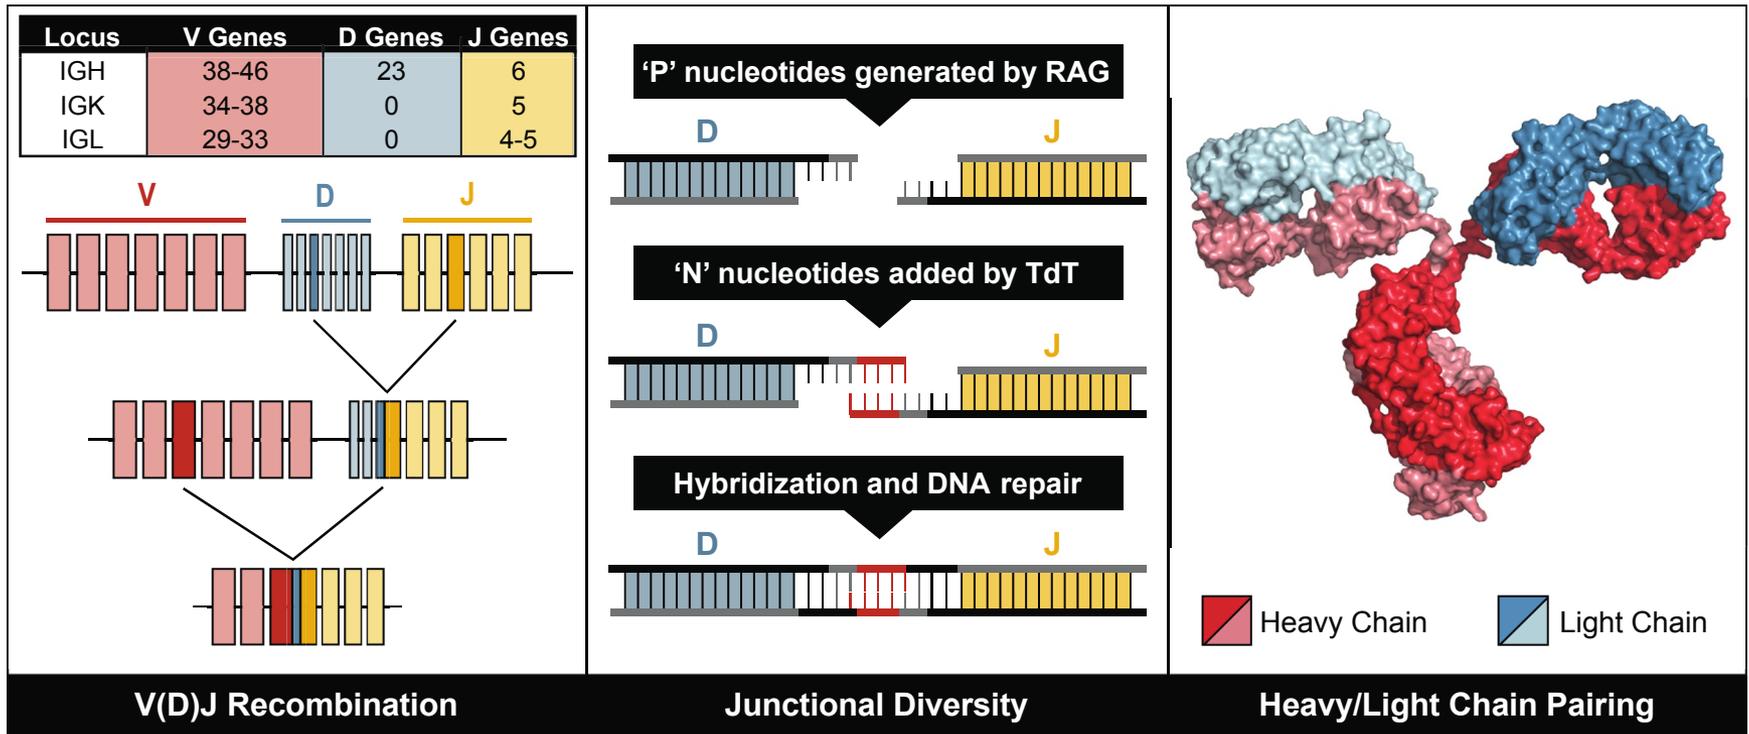

Antibodies are produced by B cells

Antibody generation is an integral part of B cell development

Antibody diversification is achieved primarily through four mechanisms

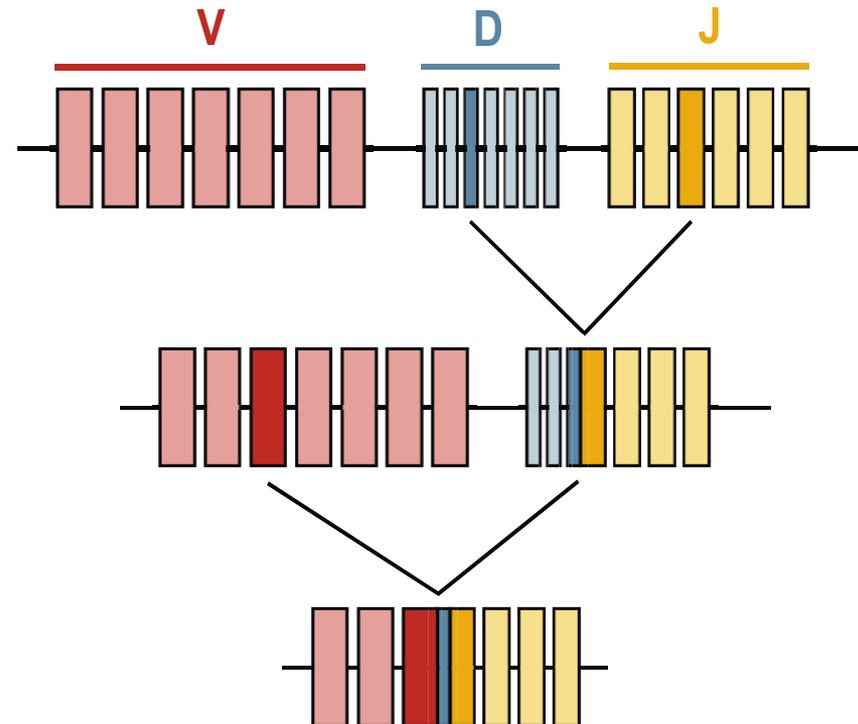

... and affinity maturation.

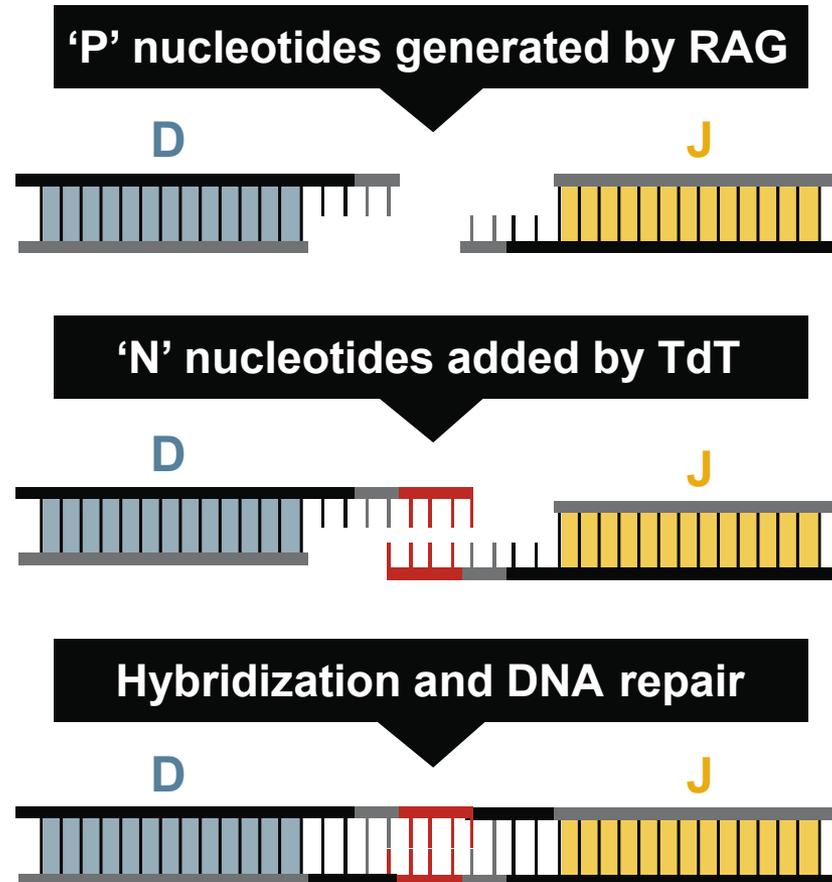

V(D)J recombination

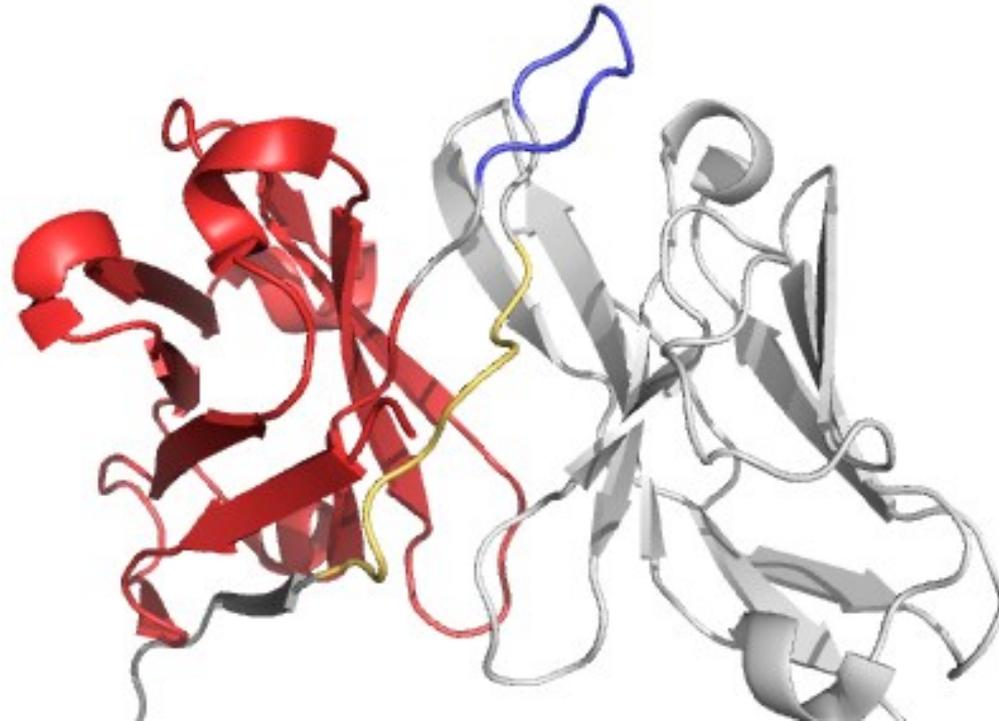

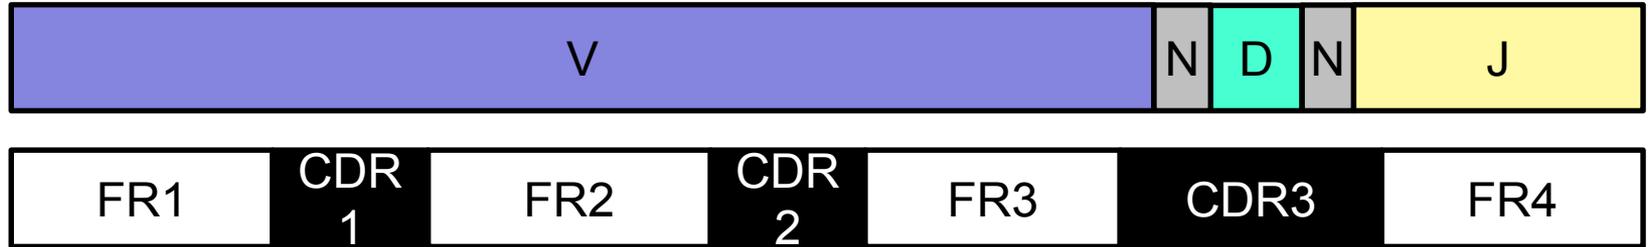

Locus	V Genes	D Genes	J Genes
IGH	38-46	23	6
IGK	34-38	0	5
IGL	29-33	0	4-5

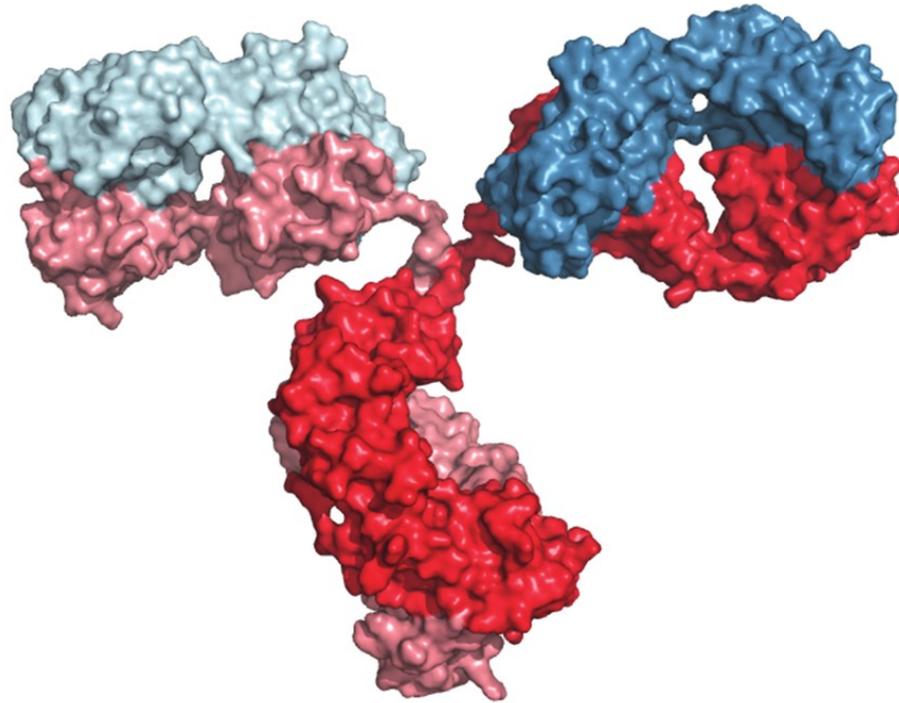

Junctional diversity

V(D)J gene sequences mapped to CDRs

Heavy/light chain pairing

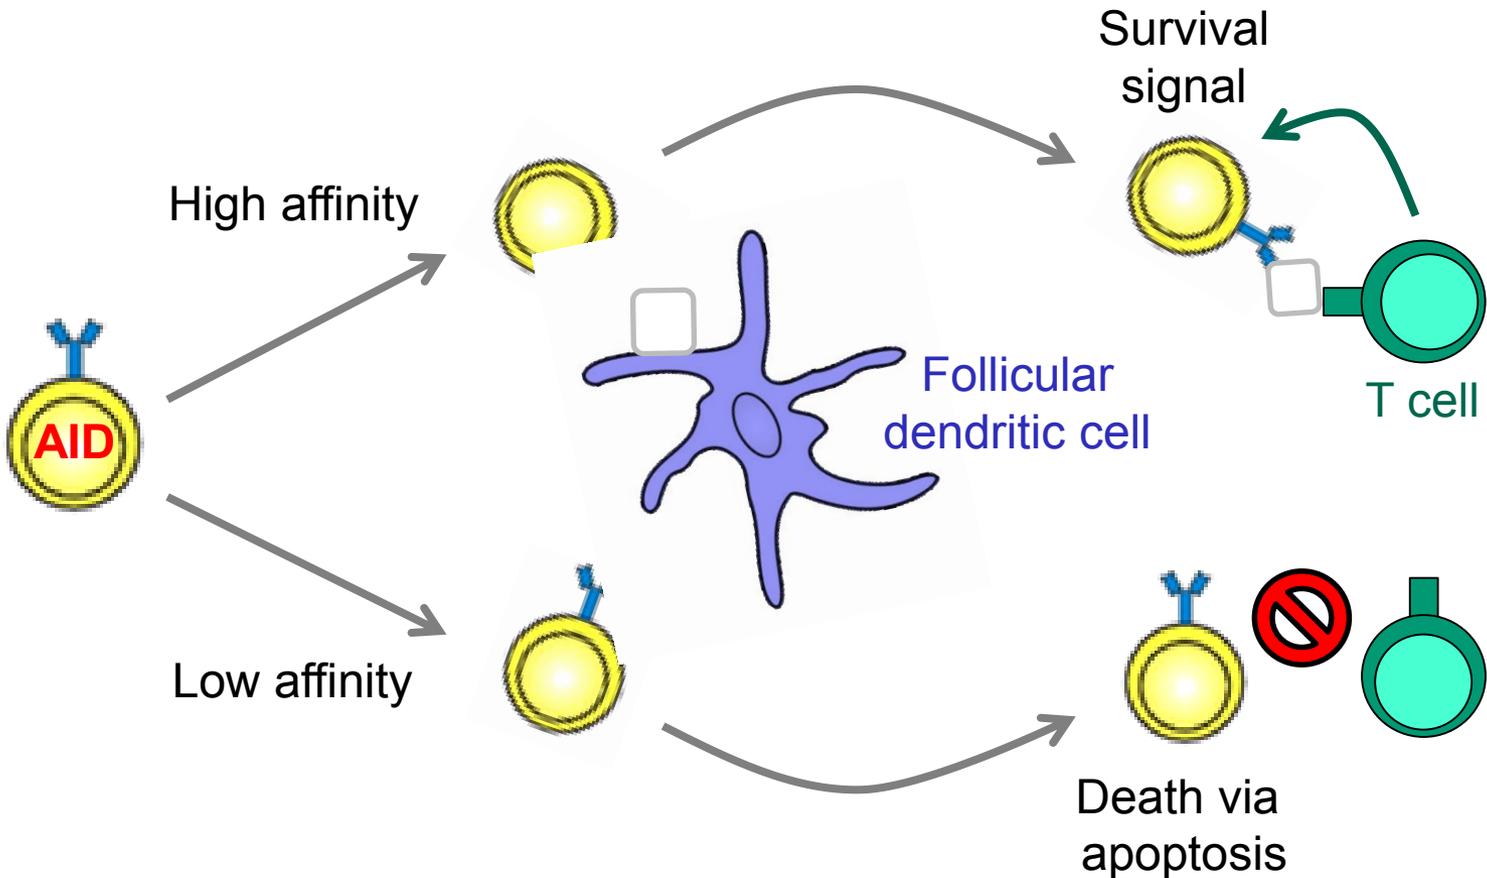

Heavy Chain

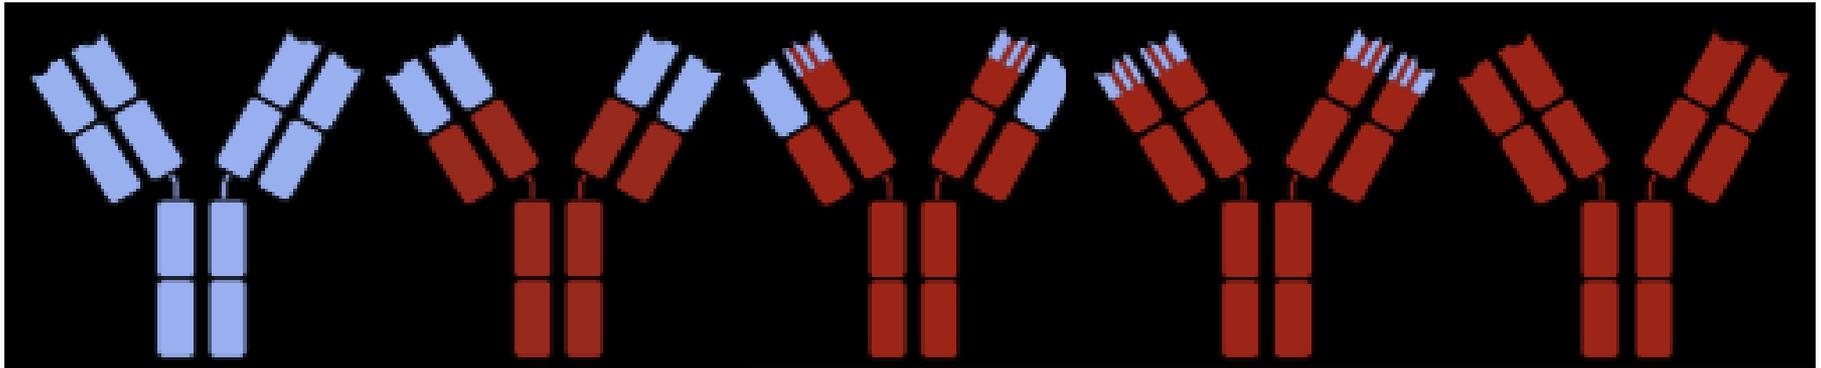

Light Chain

Affinity maturation

Humanized antibodies

Mouse
